

Consumer Care and Cleaning Information

The Porcelain Enameled Cast Iron product that you have just purchased is a highly durable product that has been manufactured to resist dulling, staining, etching and scratching when properly maintained. The key to maintaining a highly lustrous finish on your product is to use cleaners according to the specified instructions on the cleaning product label. NEVER use scouring pads, steel wool, wire brushes or any other abrasive cleaning pads to clean the surface as they may scratch the finish.

The regular use of a non-abrasive cleaner along with hot water followed by a thorough clean water rinse afterwards will sustain the natural porcelain enamel gloss for years to come. Make sure the surface is thoroughly rinsed especially after soaking dishes in water mixed with dishwashing soaps or detergents. Always use a soft cloth or sponge to clean the surface. An absorbent clean cloth or towel should be used to dry the surface after cleaning. For stubborn stains, a stiff bristled nylon brush along with a non-abrasive cleaner will work well.

Pot marks or other marks from metal can be removed by forming a Paste of powdered cleanser and a small amount of water together over the marks. Leave the paste undisturbed for no longer than ONE minute. Follow this by scrubbing with a soft cloth.

Porcelain enameled surfaces can be adversely affected by hard or soft water deposits left to accumulate and crystallize. The accumulation of these trace solids on the porcelain surface can make the finish appear dull. If dulling is experienced, a cleanser made to remove such solids as iron, lime, or calcium may need to be used periodically to maintain the natural luster of the finish.

Avoid the use of cleaning products which contain HYDROFLUORIC ACID, HYDROCHLORIC ACID, AND SODIUM HYPOCHLORITE WITH BLEACH, as these products can permanently dull the product finish.

The use of racks, baskets, rubber mats or dishpans is highly recommended when washing dishes. After use they should be removed and the sink should be rinsed and wiped out thoroughly.

NOTE: Surface dulling, staining, scratching or etching of the porcelain surface due to the misuse of cleaning products or cleaning practices will void the warranty.
